

Noel Vennard

Experienced CAD Technician with Excellent Computer and Communication Skills - Dublin, Ireland

W: <http://www.worky.com/noel-vennard>

I have been working as a Structural / Civil CAD Technician since 1999 on a variety of industrial, residential, hotel and commercial projects.
During this time I have been responsible for producing detailed general arrangement, reinforced concrete and structural steel drawings.
I also have excellent computer skills and can communicate with clients in an easy and confident manner.
I work well as a team member and can take direction easily while also having the ability to work on my own initiative.
I am proficient in AutoCAD 2008, CADS RC, Microsoft Word and Excel

Noel Vennard's Professional Experience

- 2011 - Present **DPS Engineering - CSA CAD Technician**
Working as a CAD Technician & 3D Modeller on a number of Pharmaceutical & Semi-conductor projects including the redevelopment of FAB14 at Intel, Ireland. Responsible for producing detailed Structural, Civil, Architectural and Mechanical & Electrical drawings.

- Key Skills AutoCAD, CAD Technician, Civil Technician, Structural Technician
-
- 2004 - 2005 **URS Corporation - Structural Technician**
Working as a CAD Technician on a variety of industrial, residential, hotel and commercial projects. Responsible for producing detailed General Arrangement and Structural Steel drawings.
Projects Include:
5 Lamps Development, Dublin
This project comprised a mixed development incorporating office space on upper floors and retail at ground level, all in a 5 storey over basement block. The structure was formed with in-situ concrete columns and floors.
- Key Skills AutoCAD, Structural Technician
-
- 2001 - 2004 **Walsh Goodfellow - Structural Technician**
Working as a CAD Technician on a variety of industrial, residential, hotel and commercial projects. Responsible for producing detailed General Arrangement and Structural Steel drawings.
Projects Include:
St.Laurence Shopping Centre, Drogheda
The project comprised of a retail development over basement car parking. A concrete frame was

used for economy. The construction of the basement was achieved by using secant piles, socketed into the underlying rock.

Mary's Abbey, Dublin

Mary's Abbey comprises 6 storeys of retail space above ground and a single basement. The basement was constructed using secant pile walls socketed into underlying rock. A post-tensioned slab was chosen for the concrete frame, given the spans and loading.

Key Skills AutoCAD, Structural Technician
